---

# esCollate™ is a purpose built software and services solution for manufacturing

The software provides real-time data capture and feedback to the factory team, and establishes a solid platform for streamlining processes and engaging factory employees.

The services include a review of the work environment, training and coaching of front line managers, and the implementation of strategies that improve every day performance.

---

## Benefits – Quick View

### Accelerated uptake of lean and continuous improvement

esCollate supports continuous improvement initiatives with real-time, objective analysis of plant performance. The full time presence of esCollate keeps factory employees focussed on continuous improvement during the working day.

### Fast simple data entry

Touch screens in the factory environment coupled with great software make it very easy for key information to be captured as it happens and can eliminate most, if not all, paperwork.

### Two way production schedule

esCollate real time, two way scheduling eliminates paperwork and keeps both factory employees and the planner up to date and working as a team.

### Factory employee engagement

Real time feedback on productivity against targets and insight into the employees role in performance increases intrinsic motivation and focus of attention. Coaching and training of front line managers assists them to play their part in engaging factory employees.

### Access key documentation

esCollate can display PDF documentation to factory employees that is specific to the line and production activity. This guarantees that relevant and up to date information on safety, product specifications and SOPs are always available.

### Accurate and detailed reporting

Data can be exported in real-time, accessed via database or from reports within esCollate. The standard reports include OEE metrics and summaries of production, performance, down time and support sophisticated and flexible plant modelling.

---

# The esCollate™ solution has been developed by Tima Consulting

Tima Consulting has extensive experience in the delivery of sustained improvements within the manufacturing industry.

Our approach and our solutions deliver cognitively engaged and intrinsically motivated employees, as well as work practices that lead to a performance and learning environment.

Tima Consulting has a proven track record of implementing effective change strategies that address both the human and cultural aspects of organisational performance.

All services and software are based on many years of experience, observation and research.
